

CTC advanced GmbH is expanding and creating new areas

The construction phase has started

Contact: mail@ctcadvanced.com

What has already been announced in the last few months is now becoming reality: new premises for testing facilities and office workplaces will be created on the grounds of CTC advanced GmbH.

Based on the steadily increasing demand for their testing services, CTC advanced GmbH, being member of the RWTÜV Group, will create a large test hall with flexible usage possibilities in the coming months. Initially, the test benches of the Environmental Simulation laboratory will be set into operation and their capacities will be further expanded. Hereby, spaces in the existing buildings get available and CTC advanced will use them to strengthen their resources for Radio and EMC approval testing. Thus customers can be served even faster and better. For Electrical Safety and SmartCard Technology services, another building will arise on the company premises, which will form a completely new infrastructure over four floors, ensuring a further optimized work flow for customers.

The construction phase for the new building has now started with the clearing of the construction field and the installation of temporary work spaces. Certainly the typical inconvenience coming along with large construction projects cannot be completely avoided.

During the planning phase we already tried to make any reasonable effort to minimize the interference. This resulted in a very ambitious construction schedule to ensure the completion by mid-2018. Besides short interruptions the access road to the main buildings will be kept free by the contractors. Separate parking spaces have been designated for visitors, so that customers and partners can still arrive individually and without difficulties.

Nevertheless, we would like to ask you precautionarily for your kind understanding, if inevitable changes of our workflow should occur during the construction phase.

We will gladly keep you informed about the construction progress on www.ctcadvanced.com.
