

Information Type Approval Indonesia (SDPPI)

Customer information regarding Type Approval Indonesia (SDPPI)

We, CTC advanced GmbH, would like to inform you about some major changes in the Type Approval process in **Indonesia** as stipulated in the Regulation on Telecommunication Equipment Certification (Regulation Number 7 of year 2018 / PM Kominfo No 7 Tahun 2018), effective from August 10th 2018.

Major changes:

- **Applicant** has to be an officially registered company (either local manufacturer, local distributor, local importer or local representative)
- Implementation of an **Online Single Submission (OSS) system of Republic of Indonesia**
- Only the **local company** can sign in to the OSS system by registering their **NIB** (Business Licence Number)
- **Certificate Renewals** by foreign holders are no longer possible, instead re-certification is necessary after 3 years, which also involves testing
- After re-certification a new **approval number** will be issued
- Testing is only possible by an **SDPPI-accredited test laboratory** (either local or foreign SDPPI-accredited test Lab)

CTC advanced maintains business relationships with many SDPPI-accredited test labs. We will be pleased to assist you in the approval process for your product on Indonesia market. Please feel free to contact us for further information!
